markdown2pdf

This script converts Markdown files to PDF documents using the markdown-pdf library.

Installation

1. **Clone the repository:**

   - Open your terminal or command prompt and navigate to the directory where you want to clone the repository.
   - Run the following command to clone the repository:

   ```
   git clone https://github.com/luongnv89/markdown2pdf.git
   ```

2. **Install the dependencies:**

   - Navigate to the cloned directory:

   ```
   cd markdown2pdf
   ```

   - Install the required libraries:

   ```
   npm install
   ```

Usage

1. **Create a Markdown file:**

   - Create a Markdown file (e.g., my_document.md) with the content you want to convert to PDF.

2. **Run the script:**

   - Open your terminal or command prompt and navigate to the directory where you cloned the repository.
   - Run the following command:

   ```
   node markdown2pdf.js my_document.md [output_pdf_file]
   ```

     - Replace my_document.md with the name of your Markdown file.
     - Optionally replace [output_pdf_file] with the desired name for the output PDF file. If you don't specify an output file, the script will use the same name as the input file with a .pdf extension.

3. **View the PDF:**

   - The output PDF file will be created in the same directory as the script. You can open it using your preferred PDF viewer.

Example

```
# My Document Title

This **is some text in my** Markdown document.

## Section Heading

Here's another section **with** more content.
```

To convert this Markdown content to PDF:

```
node markdown2pdf.js my_document.md
```

This will create a PDF file named my_document.pdf in the same directory as the script.
